

THUN BRITAIN- next NaabsaMAX product tanker is operating for Geos Group Ltd.

Our product tanker Thun Britain, with "NAABSA" design - Not Always Afloat But Safely Aground - has been delivered and as of today, she is entering into a long-term agreement with UK based Geos Group Ltd.

The "Thun Britain" is the second in a series of two ordered NaabsaMAX size tankers. In November 2020 the sister vessel "Thun Blyth" was delivered and has since then been trading for Geos Group.

Thun's long experience of building resource efficient, high quality vessels has been used in the design process. Focus has been to maximize the vessel's cargo intake and increase in-port performance; with the scope to allow further increased cargo lot sizes going into restricted niche ports.

"With two high quality NaabsaMAX size tankers we can offer increased flexibility in this niche segment. These tankers have been built to the absolutely latest design, enabling Geos Group Ltd. and their clients access to the most efficient and sustainable transport solution available in this segment." – Joakim Lund, CCO, Thun Tankers BV.

Thun Britain is built by Scheepswerf Ferus Smit B.V. and was launched in Leer in the beginning of January 2022.
