

BALTIC CRYSTAL IS DELIVERED

We are very glad to let you know that we have taken delivery of M/V Baltic Crystal, built at Shipsveerf Ferus Smit in Westerbroek, Netherlands. As of this week she is in trade, sailing from Eemshaven to Rotterdam for her first loading.

Baltic Crystal and her sister vessel Nordic Crystal are both a further evolvement of Erik Thun's existing fleet. Focus on efficiency, environmental care and customers' needs has been essential when developing the new vessels. They are built to the absolute latest design meeting and often exceeding existing and forthcoming regulations. Reduced fuel consumption, an increased cargo intake, less exhaust emissions and lowered noise levels are a few examples of our trademarks. The new-buildings are equipped with a frequency converter for versatile shore power connection.

"We are looking forward to the next generation of vessels providing our clients with sustainable and smart solutions, delivering the cargo on time with the best environmental performance possible today" says Jens Bäckström, Senior Charterer at Erik Thun AB.

"We have always had a high focus on resource efficiency translating into modern environmental care. It is essential that we build vessels fit for the future and our long experience in the business paired with our vision to be a sustainable Swedish partner over generations, gives us a good basis for continual improvement and innovative design" adds Henrik Källsson, Deputy Managing Director at Erik Thun AB.

The main characteristics for the vessels are:

- Length overall 99.99 m
- Max dwt draft 7 m
- Cargo tank capacity about 245.000 cbt
- Breath moulded 13.35 m
- Deadweight 6380 ton
- Ice Class 1A (Finnish Swedish)
