

## Erik Thun Group Launches Nossan: A New Milestone in Sustainable Shipping

### **Lidköping, Sweden - February 7, 2025**

Erik Thun Group has officially launched Nossan, the third vessel in its innovative Lake Vänern MAX series, reinforcing its commitment to sustainable and efficient shipping.

Built at the renowned Ferus Smit shipyard, Nossan continues a legacy that began in 1989 when the first ship to bear the name was constructed. This latest addition, the 46th vessel from the same shipyard, is designed to optimize cargo transport across Sweden and Europe's inland and coastal waterways.

"With the launch of Nossan, we are taking another step toward a greener future for maritime transport," said Johan Källsson, Managing Director at Erik Thun Group. "This vessel is a testament to our ongoing investment in cutting-edge technology and sustainable solutions that reduce our environmental footprint while maintaining the highest operational standards."

The Lake Vänern MAX series is tailored to navigate the unique demands of Swedish and European waterways while delivering higher efficiency and lower emissions. By introducing Nossan, Erik Thun Group continues its long-standing mission to innovate, invest, and lead in environmentally responsible shipping.

As Erik Thun Group advances its sustainability agenda, the company invites industry leaders, policymakers, and stakeholders to join in shaping the future of maritime logistics.
